- > Durable and Non-Durable Goods (NAICS 32)

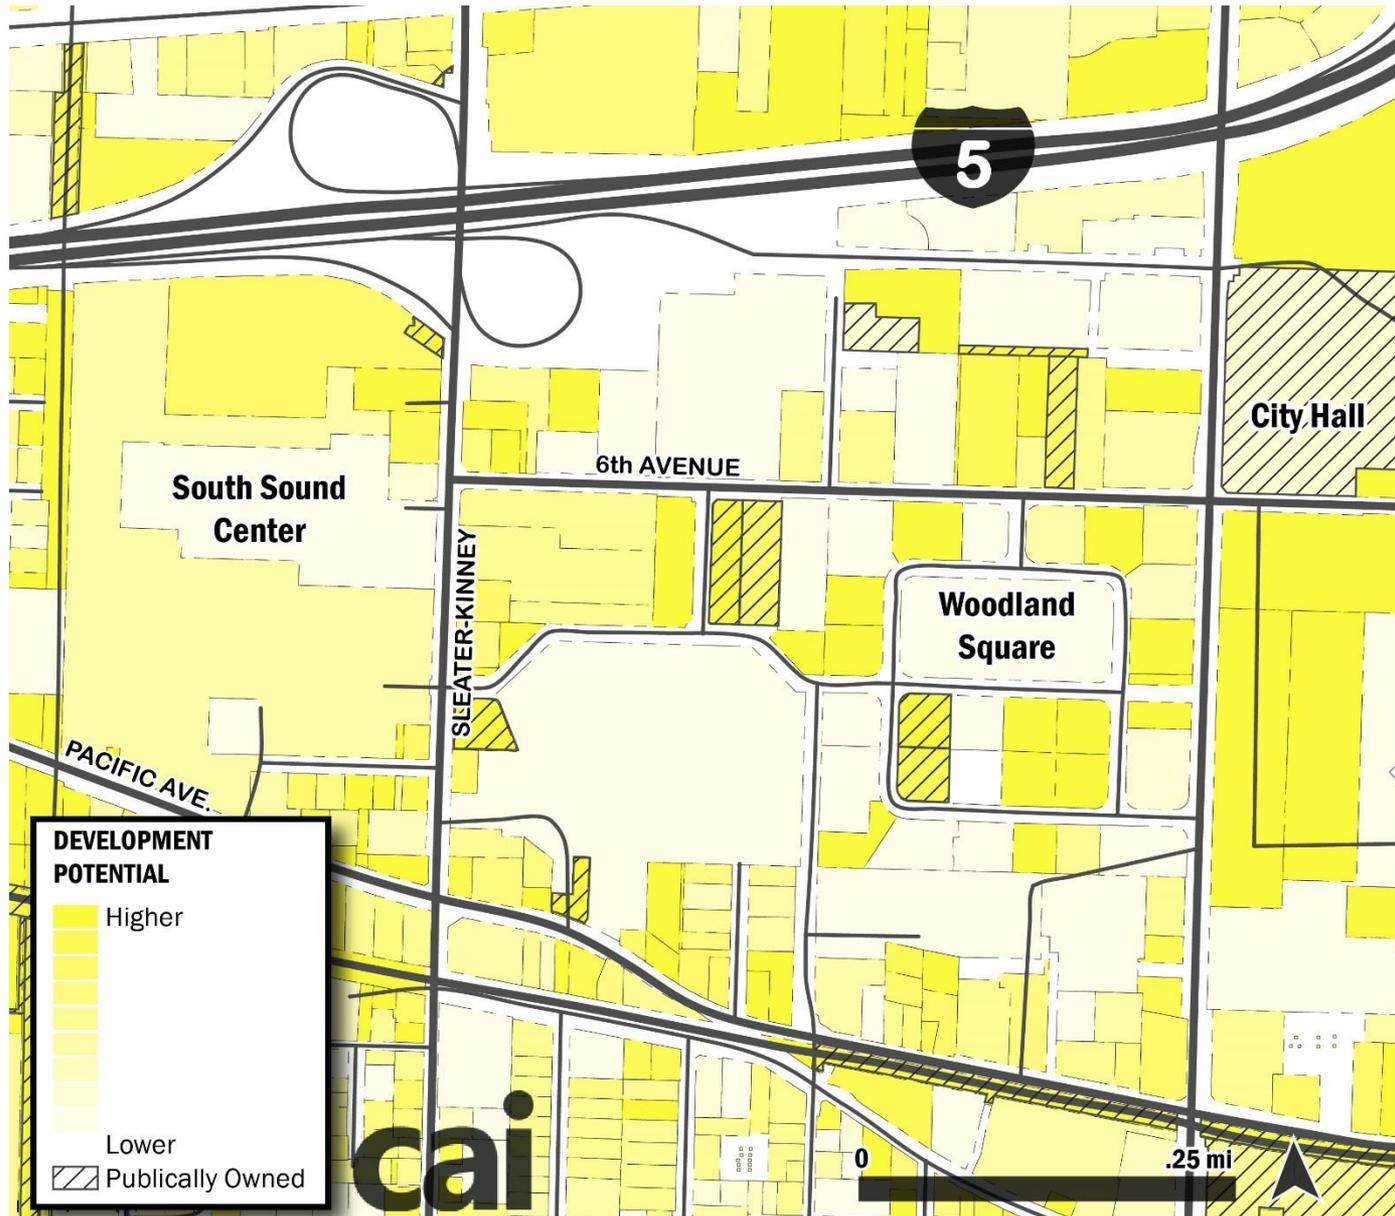

## How many square feet could be developed in Lacey between 2015 and 2035?

The truth is nobody knows exactly how much development will occur in the future. However, economic forecasts allow us to create ballpark estimates that can be useful for planning exercises. According to forecasts produced by TRPC and analytics completed by Community Attributes, Lacey could see up to 6.8 million square feet of residential development and 5 million square feet of new commercial development by 2035.

**How much of that will the Woodland District capture?**

# PROSPECTS FOR GROWTH

**Exhibit 4. Ratio of Assessed Improvement Value to Assessed Land Value, City of Lacey, 2009**

Source: Thurston County

This map uses data from the Thurston County Assessor's Office to evaluate certain barriers to redevelopment. Where assessed improvement values (the value of the buildings on a parcel) are high relative to assessed land values, the existing structures are a disincentive to redevelop the property (darker yellow). Conversely, where assessed improvement values are low relative to land values, the current develop may not represent the highest and best use of the property, indicating an incentive to redevelop.

# 1. ANALYSIS

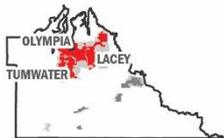

## A. Prospects for Growth

## B. Market Data

- i. Retail
- ii. Office
- iii. Industrial
- iv. Flex
- v. Multifamily

## C. Stakeholder Perspectives

The following section summarizes key findings from five interviews CAI conducted with real estate professionals familiar with Lacey and the Woodland District. The findings are grouped into major categories for legibility. Some findings may appear to be internally contradictory if stakeholders disagreed with each other or related contrasting opinions.

The consultant team will use the findings from the interviews to better inform assumptions about development feasibility.

## GENERAL COMMENTS

- > The Woodland District represents the best opportunity in Lacey for large-scale mixed-use development; there is a significant opportunity to draw on existing assets (e.g. ample tree canopy, accessibility from the interstate, existing retail concentration, nearby student population) to create a “day and night” destination for residents and visitors.
- > The Woodland District is suitable for many development types, but single- and mixed-use multifamily residential and office rehabilitation projects appear to be the most feasible based on current market interest.
- > Low land and building prices over the last several years have allowed investors to purchase property at a price that allows significant investment in rehabilitation and upgrading, which are necessary for many of the properties in the Woodland District to compete.
- > Incremental approaches to planning and development in the Woodland District will be most successful in creating a place that embodies the city’s vision.

## RETAIL

- > Increasing the day-time employment base is a critical component of attracting new retailers.
- > Many of the existing retail centers need to be rejuvenated. Additional retail and restaurants may be feasible on a smaller scale.

## OFFICE

- > There will likely continue to be a mix of public and private sector tenants in the office buildings in the Woodland District, but each has a different set of needs relating to space and tenant improvement packages.

## RESIDENTIAL

- > Vertical mixed-use residential development may not be the best fit; single-use multifamily could complement existing commercial uses in the District. Product types need to be a good fit for families.
- > Students from St. Martin's and SPSCC are an excellent target market for rental housing in the District.

## PARKING

- > Surface parking is the most feasible way to meet parking requirements at this time. While one development in the Woodland District currently has a mix of surface and underground parking, current rent levels appear to be too low to justify the cost of structured parking. Furthermore, land cost is currently low enough that it may be economically advantageous to purchase enough land to accommodate the breadth of a surface lot rather than to incur the cost of building multiple levels of parking.
- > There is substantial street parking available in the Woodland District, such that some development projects may be able to accommodate some of the required parking on-street.
- > There is an opportunity for developing at lower parking ratios (possibly below one space per dwelling unit) with shared daytime parking

## DEVELOPMENT CLIMATE

- > Lacey has a development-friendly perception regionally that will help create momentum for the Woodland District. The continued perception (reality?) of lower fees is important.

## CHALLENGES

- > The district still suffers from “funky” access and a lack of direct visibility to Interstate 5. Hawk’s Prairie appears to be outcompeting the Woodland District, in part due to better freeway access.
- > Tall trees along the freeway block view corridors, limiting visibility for District tenants.
- > Some stakeholders are skeptical that the large-format (i.e. “big box”) retailers in the Woodland District will ever transition to more urban models with structured parking and multistory stores.
- > Code revisions that limit parking, restrict lanes of travel and widen sidewalks could be perceived as challenges to the commercial vitality of the District.
